

Construction

Paris s. Miles-Brenden

- a.) Simulation with 'halt-break' and continuance.
- b.) Random-probability on chess, and strategy of ecology.
 - 1.) Minor note: Defense.
- c.) Note – English & Post logistic comparative transportation and non.
- d.) An-hour in two-hour(s); is indeed a dialectic upon an unmarked and a marked, for of objectionable king-number in game.
- e.) The only way to take data, is a separational 'vertical entropic signature' in weight to value of chart and measure of dice, or for instance, of either the second and first moment.
- f.) The digression of one polynomial 'hypergeometric assembly of moment's' is a probabilistic relation of liability to law, and the relationship to [unto and of] the numerical measure.
- g.) To address via the instant of a signal, in-suspension of a horizontal epsilon-lift in entropic assignment, details the quantum property, such that addressing a sequential series of signal packets, relates of partitionable numerical sum.
- h.) Thus, and then, to relate of a secondary moment, upon the secondary resonance, counters the juxtaposition of statistic, to which the sum is comparative *in-distribution* the resultant of application of probability.
- i.) Finally, to relate of the stages in approach predictively held of of measure and containment of answerable and computable result, takes us beyond the measures of certain computationally valid excursions, to defensive and opponency in games.
- j.) Thus, it is certain, then, that it takes a comparative in two people, and a historical lesson may be instructed of inferential dialog.
- k.) Probability and measure as in mathematics, with polynomial-sigmoid non-linear statistic model equative end, such that amends to model and philosophical value only *then* (an *if and only if*) two co-participantants value dialog.
