

Paris (s.) Miles-Brenden

In My Defense

2025 – April 25th

- 1.) The declarative opening of the subject, is with the introduction of a device, and procedure of ailed relationship of diagnostic progression, of delay and gap.
- 2.) The undeclared, is in-principle basis, the salvaged relation of an amends, for in a dichotomistic procedure and investigative process of data survey.
- 3.) Thus, to naturalize of the 'filter process' what is an $e(n)$ and $d(n)$, for which the pre-process is a focal element is ancillary an ideal, mark, & closure of policy.
- 4.) That $d(n) < e(n)$ is a process, reflection is diminishable below a geometric extremum, to which (in power in) is undislocable 'chart' from non-viability.
- 5.) A dichotomy is answerable herein, of the justification of it's alternative basis, by which an alabai is furnishable by it's conditional, of reflectivity.
- 6.) Then, from-which as-supportive, the defensible trust is a non-q, for a non-p, in which there are two defenistrable priorities, for one if & only if exclusive.
- 7.) Then, of which implemented is 'as' there is a stack, of which the memory procedure remains in purview measurable locale and time unto domain.

Thus, a peripheral notion does not withstand what is a locable ailment, while a focal element re-centralizes the defensible constrast of a case, on behalf of peer and centralized peer-agency, of two in prior relationship, per the limitations of time, in duration, comparable a notion of address and acknowledged limitation in majority unto the suspect notion of peer in action of object under it's intrascopic motivated discovery in priority to an alternatively provided peer.
