

Dear President Donald Trump and Vice President J.D. Vance;

It is my privilege to live in America, and for some-time, the welfare I have lived under has greatly concerned me, but while I am poor, I find sufficiency to make means to find happiness, with the things I have, and I am unaccompanied with fervor or favor to a wife to be with me.

I hold concerns for the future, having no partner, and thinking the future (pursued) will work to the best, but the occasion of my addressing you, is not to rely that such means trepidously support the means of all, or occasion to the best or greatest outcomes, when we are idle, and living in speculation. It is for these reasons, I take pause to a moment to draw a genuinely simple program of assuring means of my future, finding the manner of executive choice and the parallels of psychology dealing with object-container and philosophy of mental horizon.

The 'horizon', is a detail that is a fair reprieve, in drawing from the locus of notary, to the past, whence of occasion (mentioned here again) there is a fair-oft 'fog' of war and complication, and drawing to what is the conviction the future can coterminably inform the past, is the disjuncture of in usual a nature of phobia to madness, but it is lesser so in this term*. The four fold disproportioned elements of suggestion lead us to believe a two-fold relationship, for term of exceptional true and false clarifier do not inform the past, but while this is true, a conflict arises with the counterfactual evidence of an environmental system.

In this vein, the grouping and portion of a simple topological argument of path-wise extremum, inform from what is yet-informed of four separative means in sound, (audio), light (visual), and sensory deprivation decompression; the condition of confidence subtly can shift given precipitation of events in the real world, for it is us whom are witnesses of the observed.

In valuating my necessary explanation, it has for-these terms and thoughts to the consideration of dangers to our people, the land of our home, and people afar, under actions of conflict. Assuredly, the conflict appraised, is one of weapons of mass destruction, and biological error and resumption concerning the vast state of interest in war. I would not apportion to support an attack-presumption of high cost, however, the past has taught me (of a definite) a simple manner of being, to the utility of finding means to support defense of a nation in the non-retaliation and wise choice of a defeat through means of a simple leverage of motivation and manual-procedure.

For these reasons, I developed a device, (of two switches) which reprieve the conflict variables to a natural resting point, and have tested it, in the two switchable elements connected by two and two wires, these rest in positions and change through manual action, in such a manner to disconnection and connection to shift a four-state system, despite the actual connective feature of two and two wires of the total crossover.

For me, this has been an invaluable experience, and to explain, earthquakes are isosymmetric to the conclusive basis in all symmetries of a mutual condition of mass and displacement. I have not modeled gravity through these theories, but have found the light field is toplinear in the variables of the computational element, and precipitates what may be a danger of the nature of long-far-and-shot noise in sensor equipment. This possibly meets the means to explain the prior investigation into my person, and the means of finding relevance to matters foreign and afar.

Paris Miles-Brenden (Pathrias as I thought...)
