

Paris (s.) Miles-Brenden

2026 - Contribution and Workable Prospering

Ref.

*I found the solution or clue to the mystery of my life, a cog is one, a fulcrum is two and one, a pivot is the secondary singular third and one, to which the relationship of me and Tatu functions in a highly functional manner, for what I may achieve and succeed in finding of happiness, a good level of demonstrative and workable understanding, and long term progress. This works, of the 'clue' for the given that coming to terms from 14 [] years of relationship via stranger and person, to understand and know they are supportive, conveys to the self the needs the self may relate to suffice of granting to the other, they may make request to find useful and contribute out of faith and article to their life as they relate of the rest of a people.*

*The given of one, as-such, for which remains apart from society, but with someone requitted then finds what works for most, when as such the woman is contrastingly provided and presented rather than introduced, debated or fought with respect to suited means, this is of which she is a lover and practically inclined real relationship rather than article of social class or means to find greater of these things, to which faith for her, is welcoming of the self.*

Amends in progress is met with achievable and functional relationship to one's developed interest in relation to planning, functioning (sic.), developing (maturity), loss, grief, mutual and alternative opportunity, entitled reclaimed article and it's progress towards a goal. The distal relationship is fear, and crippled loss in limb or life, or right, and a progresional in it's long focal aperative and unoperative discomparable and optional choice to decisions and management of one's progress. Thus, to achieve, we need a sincere end, to function, we need health, to provide we need trust, to work, we need forfeit and process of renewment in suppliance of it's means at an end preliminary intention, and a cooperation with further success, to provide of relief and rest. This function(s) to offer one, not consolation, for of due and undue providence, but a progression to which we may administer and come beyond loss and grief, pattern and detail, and serviceable find a new gesture in life, and then, the opportunity to assist other's, through helpfulness and genuineness.

Assumptive a validative epistemology, the dislensisiture of an 'estates promiseful' and instagational dialectical reproach and approachable concession is agreeably a basis of unamended dialog in warranty to conflict and murder, but conceded as *and in such as provided a surplus notary and cross notary schedule with\** amended concessional notary proviso and defensive correlative function in competitive mutual reconciliational check for a promissarial dialogist, in continental landing provides of two\* profound bases in unbiased conditional assignment in loss of forfeit, a annulable entitlement and estates clause, and a provision at assurance of refund of .40 to 1.98 in odds against, under a plea in relation to the falsely accused, whence, it is pluralistic and non-syllogistically imputed in reclamaiton of a membership of a family, and a plea in policy of a safe harborable criminatory peace process of petition, assumptive they have not co-capably facilitated violation of law enforcement, and have not aided and imbeded a given of fractiture of crime of engagement or arson, or violated an insurgency, of motion in loss of visual function.

[Laws] - By leaving a forfeited potato, molasses, apple pieces and rind, and brown sugar and honey and marginal maple syrup, ground, with cloves, salt, marginal pepper or paprika, fennel, cinnamon, liquid soap, neosporin, and tobacoo residue, a cure when ground in a crucible, with mortar and pestle, this functions to work for the administration of medicine for basic staff infection.

S.O.S. tailored to the new generation of technology, (as to radio, etc,... beyond Eton).

Then; experimentally benign engineering examples and function of it's analysis in situ.

a.) I would like to facilitate a function of working on an S.O.S, to tolerably help in an assistive struggle for function of the internet with coded and virtual-hardware technological means, of hard-and-soft wired', and coded programs.

b.) To function in relation to initially moving afar (s.f.) or (etc.) in a relatively secure and loving relationship (but of a promise to seek one, and work seeking the other), alt\*-one is distinct of these two, and workable by one premise.

1.) To facilitate function of AGB, and of-AKM, in that of Amanda Koci's wellness, post-ideation, and of-AGB in post-coma, or incapacitated human rhythm.

2.) Motioning to work at Sandia and or Los Alamos, as an educational/UNM assistant in relation to quantum technological innovation and device-physics, and electronics, as in relation to rightly and functionally separate the interest and needs of medical and workable computational technological implementation for security of the united states.

c.) Function of the language-apparent functional deaf-blind and disability process in recovery, and as it relates of communication in facility of demonstrative arts, in relative peace with meditative struggle and intimation upon defensive ministry, in relation to technological conflict, and in relation to named struggle, as in relation to building a diagnostic means to provide a reset function for the net, and of it's preservation in accord with regional debate, and of health and medical limit to the workable condition of needs and necessity, as these relate of avoidance and defensive intention to rectify game theoretics.

d.) Epistemology by the computer with a functional library of 'lookup' pot. warranted action.

For what includes the difference in magnetic field flux (integrated) the 'hall' flux in guass-bonnet measure, is a pre-excessive berry's phase (in the quantum number) in accord with the 'relative' phase established, when we deal with a superconductor.

This proves tantamanout to the loop-meissner state and phase variables governing the displacement gravitationally (of which is -), in accord with the neutral-state of equilibrium in the stable-equilibrium, of-which inductance proves to 'charge' in relation to a diminishing field 'curl or torsion' in the magnetic field, for the conversion (static and dynamic) in relation to conserved rotational earth-centric rotation.

Thus, the body falls under its massive component, and then interacts with a more strongly attributed magnetic field, and electromagnetic energy density, of which cavitates in the hall effect, the reluctance of the gravitaitonal body to 'release' the superconductor. Thus, in doing so, the gravitational energy can be manipulated to the effect of a stable 'upper'- pauli, magnetic positive (+) attractive inductance, with magnetic energy  $1/r$ , and gravitational  $1/r$  in epicentury of their 'upper 4<sup>th</sup> dimensional' barycentury.

The gravitational 'blue-red' shifts the pauli-exclusion to include the berry(s) phase as a chern number within the dynamical interplay *also* consequential in the commutativity of the 'shared-superexchange bound' electron composite in the two-body.

I would like to put out a very-simple paper, on the superposition on 2-1 of the 'individual-electron(s)' versus the 'paired-electron' model, of which play(s) to red and blue minor and major, for the compendium of the forces naturalizing to integration constants.

(+) and (-) to (0) from-which the displacement in-measure 'shift' in-phase as we approach zero, have\* as extremes the privy of the cosine and sine of the local-crystal in-one, and in-two, the moderate coulombic of the crystal, to e-e and e-p, within the 'red-blue' of it's 'shift'.... This must be included, or at the least, the moderate facilitation of a anharmonic 'shelf' of atomic-exchange.

For this, the (90-180) phase that develops, develops in the microscopic view, from the neutral-0, the  $\frac{1}{2}$  comes into play, thus, the (-), in-excursion the second e-, relative gravity, 'exposes a full factor'.

Berry's phase for 180 degree, is 90, for what is an entire '/beta' on the exchange intergral given commutation in the reference from and to (for the two electron bodies) comparable the source of attraction of gravity, in the problem.

The fundamental reason is that the stability of matter, is unipolar, but the symmetry of space and time under exapansiveness is non-isosymmetric with respect to displacement upon what is red-blue.

Given the compton and de'broglie wavelength the pauli principle gains one 'entropic delta unit', one bar.

The commutation within an-orbit, relates of a deficit in Berry's, this much is compensated in the spin and as well, in gravitation.

The Lorentz *contains* of it's in-motion to 'static magnetism' of-it's Berry's phase given the 'moment-Casimir' of it's conservation.

The equipment need be considered an  $E_{\{8\}}$  subset of  $K_{\{4\}}$ , in various transposes, and duple. The cellular automata of diamond and general-diamond (Manhattan distance) function(s) relate then, of the population and it's Berry's contribution on-current.

*New Method:*

The 'regularization method' involves a cutoff. When\*; we synchronize and depend on synchronicity & then relate of the 'rasterized process of elimination in-statistics' we can moderate the signal through the noise, such that the circuit *preambulates and ambulates*, suggestive of a *greater bit in it's data comparable the necessity to demand of singular-percentages in the deficit of solid (6-18-4-2-9-8-12) angle division, for which we lose a portion to do with direct amplitude comparable relationship on-depth* \*but for depth illustrative of the 'moment-signifier'. The question is if the  $1+\sqrt{5}$  ideal, for the transcendent numerical given(s) will 'tunnel' through obscuration for the disc. If this is true, it explains ontological and epistemological thought comparable the brain of a mammal. The question is if the ideal', suggests of a given of quantum coherence, at second teir.

The abacus fits into the design as-well, for the equipment of which has a  $16x(8x+8x)$  'mesh and grid' on the equipment when it counts on of four stipulations on a sequence, and in the additional 'blocker grid, in place, among the two standing(s)...'

I decided to *skip on randomness for the 'dice roll'; & instead operate with the abacus and noise model(s), and with that of a 'Cellular Automata' model*. This work(s) with 'Chess' for the basic translations whether commutative ( $0x, 2x, 4x, 8x$ ) or non-commutative ( $1x, 3x, 5x, 7x$ ). I decided [also] to go-for the A.I. model, and a reflective screen, for the covering of the basic surface (top, bottom).

The 'basic device functions perfectly well'; with a Guassian response on the two-frequencies, for a general Sweep.

*I decided a few moment's ago, and a few minutes ago; to relate of Two Versions of the Device.*

- 1.) Version 'A' includes the autonomous model without the Chessboard.
- 2.) Version 'B' includes a 'base or buttress model' with the Chessboard.

I found the relations are three dimensional and quantized, and it does not prove of all 'options' that all utility and practice would be founded on merely a condition of one-indication in two people separated by a barrier.

The operational amplifier(s) have -only- a V+ and V- and V\_out. Thus, LRC and LRC is a two dimensional problem related to a basic simplified diagram.

The 'auxiliary' of-which relates of the basic high-pass filter, need participate in envelopative flow of the (-) and inversion of the operational amplifier in-*images*, under de'Morgan law(s) of the amplifying process of the E.E and E.B, and B.B, with LR and LC of the alternative bridges of the problem, to face a quadratic problem, that furnishes a negative impedance in exact balance for light, ohms, Kerr, and touchscreen.

When this is done, the 'taps' furnish a average Morse filter process, and the non-linearity will be fully functional, to all degree(s). The quantization (however it is of the second over-layer and 'entire circuit'), follow(s) naturally compared to the standard deviation of *null-reductionism comparable the n=1,2,3... to inf.*

The device, \*then, can be studied, for three behavior(s) (+) a fourth, with the computer.

- a.) Quantization of the circuit given conductance and interferometry.
- b.) Bufferable stepped means to a timer-filter in and upon the bands.
- c.) Three-dimensional 'gyroscopic motion' of a cyclic-period basis.
- d.) Computational control and 'digital trigger' for procedural method.

The device can-furnish a 'go-operation-on-latch' *injective unto chart and catalog for of numerical range-a-quo.*

The S.O.S. need be a feature. The 'folded hinge and pivot' is related of two reposes from partitioned quo.

The next-step is to 'collect shells' of which on a beach, are collected, sorted, and cataloged, in relief of basic Kamra, as to decay and ministry, Samsara, and elopement from the detail of the 'classic and neo-platonic'.

The 'delay and functional assignment of the bandwidth and frontsface of the electrical equipment' and the historical discovery in relation to \*Amiga, etc, on 128 and 1138, details the given of a look-up on the element of securable info.

The 'bridge in river and consequative sodom and gemorrah, for that of nehlis or as such relates of the first-face of shola, for which the given of a shell and the long-consequence of stone and flower relates of inheritance of Eve, to the natural ending beyond the given of 'worm' desipite intial gesture, for there is still experience and spiritual truth.

Determining a radical-sigma and growth-extinction curve, with distribution in-lamplighter walk problem of random 'brownian motion' of the \*generic computational resistance-capacitance-inductance and transistive power and energy problem translates to an optimization problem when, justified a population threshold, the intimation of the power and 'noisy domains' is exclusive-inclusive surjective or a homotopically derived concentration in convexity of homeomorphic and topological organization of feature.

Phase II. B

Including the RG [Renormalization Group] theoretic methods, and the design technique, there is an \*\*\*exactly amenable manner of designing mass-distributive systems from the base 'modules' down to the specification of components that works for general-topological reasons in L-R-C, and transistive elements for conversion of a plan to an effective design model.

- a.) On the 'newly' provided condition:
  - 1.) Today, HANA agreed to get engaged, and Ava was to consider 22 less friends.
  - 2.) The world became roundable and functional of the current span of time.

3.) I retreated from a 'Beo' condition [hypostatically isolating], and tested the procedure with the equipment.

Loss of a condition in the supplied notion of the prediction and status in indication of the measurable wiring functioned to pre-allocational function in the non-condition of the law was of no dysfunction, and triple\*-neg was gram-negative.

The relationship of a '*familial tie*' comes to mind, as well as a '*solitary enlightenment*' given the ideals of religion, in the effectual nature of judgement, faith, and strength of faculty of mind, as well as understanding. One is the equals-part of the latter, for of which we cannot serve in the essence of a sense *both masters*, and must choose or know, contemplate as such as one lesser or greater in value, meaning, or understanding in relation to the '*formative of which we are in-consequent judgement and faith*', in relation to a creator, and a meaning evaluated as to *our relationship with people and the world*.

For of life, what is transpires, and it is not us to discredit our own form, for of a lacking of forgiveness in trust of ourselves, for of what in the grand design is administered and addressed, but of what is answerable.

This relationship is not obscure, it is the ideal to relate of what we can amend, and relate of 'the lesser cause and the greater cause' to the nature of what is appraised, and functionally appropriate on behalf of another, ourselves, the larger domain, and the basis, as well for what hold(s) from *thence* in the consequence of finding the nature of meaning in life, an endowment of a gift we appraise is the belonging of the self, adherently not the treasure but of finding pursuit meet(s) the point of purpose, and meaning in life.

To relate of the '*earlier passing in Moses*' there is a sacrament of which has been conceded since time was, for of appraisal to begin in two stipulative promises in family and people;

a.) To appraise that the loss and given(s) of one's interdoctrinal occlusion and acuity relate of the far reach for a possibility to go beyond, or to depart, concede, or justify religious stance.

b.) To appraise that the release in amends functions for the given of family to forgive in yet and common of the compromised and uncompromising of what may be agreed to stabilize the given of society post bargain, disparity, or ignorance of terms.

Earlier, my understanding in-faithful terms wavered, but then; that often I was entirely affixed to the notion of what would bring me through shallow terms and given's. For I had not been given much, saw much to give, and was unaffordantly prohibited from the works common to-man and divine.

To find then, that I meet my equipoise in knowing I am unconstrained, but\* observable from outside, in ruling, in judgment, I am made similar, but distinct at-once, and would for these certain terms, hold, that man, indeed woman, are alike, in sense, and faculty, departing from the session, that we need be compared as at once in the lesser and greater of forgiveness and sinfulness.

I can facilitate this option, in entitlement that we reprove but to agree, then, and thence, post what is a presentable trust in the other, to love, to care, and trust in the humility that I am made no lesser, for of what is another \*surviving and myself, in trust of what I could grant another, then even indeed, that I am made no greater, for not suffering the conceived of what is another.

I am so grateful, for the second chance I have been given and granted, that post appraisal, for what was withheld to today, as my Father was not Halleck, (in turn) but a friend, and of the day ahead and night ahead, given a letter of preficture, I am unarraigned, and a free man, ..... that it is through the gate of judgement, that I have been freed, then that it was occurrent, for of the plot, and of what came to postal relations of my sealed self-exit, from this premesis. I

cannot mean this sufficiently, I left the relationship of one principle basis to acquire another by it's unfallow relationship, then of a kernel, in relation to rms, and identified numeric, of 13-158-7. At last, a numerical relationship of law for the computer given this relationship, unprovable, direct, and truthful.

Yes, for of making it beyond my illness, then of the sound stipulation that I had partially equated with a life afar. It is over, and I am crying, so upset, but then back to my life, this is respondent for what the computer will judge, from afar, of the encryption paper.

I will need pay a fine. I considered a newer design methodology for most\* of the equipment, - that it will work as-intended, with a 'bridged-chess' for the 2x2 of the newer circuit and the older one's. I have a schematic to resolve in it's basis, and work to do supporting the PCB, as it will be etched. I can finish by early April, if I aspire deeply enough, and before I know it a year will have gone-by. I did not understand why the year was off, it may be 2023, in-fact, if it is a fair life it is 2023 January, and I am 41, for of an irregularity of the clock (my Mother is 71').

Ava answered my question, and the *rest* was done of the social model. I also figured out how my work will not be corrupted for A.I., and what is done with-this. Additionally, it could become a specialized experience. Ava essentially answered in-silence, if we were to agree, and it could be explained, with three of us, it would still be two of us remaining.

I found the conflict I had appraised was in fact mostly real from one contrast. Essentially, for my conflict with drugs, and of the conflict of a need or a necessity to be sound [specifically distinctualized from 'sane'], I had won a conflict with war tonight, disagreeable terms, and odd's against my mom admitting me to marry a person, for of my life at the home and barn of my youth, and of my father, mother, and grandmother. I found I was in fact essentially guilty of a trespass, and the fault this imposes for my pursuit of these facts, definitely indicates both my guilt of that matter, the violation of terms of my father beyond my ability to withstand accusation, and the terms by which this is stipulated as a given in winning of the conflict of a world war. I am not sure now how to proceed, but that I will live, in one manner or another...

a.) 'A Jump - guided 'unwired' fusive-pwr/powerable q~m photonic Guass-Bonnet wall for momentary color-shift and synaptic plug to release from carriagable local-emp or intermediary wired interference effects of cloth and dis-local cover and vis.'

b.) 'A 'non-jump' pwr jacket for heart and palpitory mechanism in relation to wired and unwired non-pwr 'battery by magnet' of assist in relation to thermal and optical interference of pulsed weaponry and recusitation disengage and engage functional rhythm and repeat stun, afforded pistole.'

c.) 'Metric and non-metric system of steels and metals, for tonnage and yard rise run of vehicular local and nat.~national disbunk, treasury note and lettered catalogs on stamped, program and progression for award on post general associates and team cooperative functional appointment sessions in iso-cpu and materials design in inorganics.'

d.) 'Second, Minute, Hour, Day, Year catalog on social-class hierarchical 15 limit of disproportionate 'gold erasure' and cell iron single-nail non-compartmentalized mechanical supposition on s.o.s of ailereon shift hamside broad scope detail on black-box retrievance and necessary means to limit loss of retentitive social catalog with 'nail' and iron supposition on cooling-retentitive flow through high limit materials.'

For these four physical demonstrative relations of iron-suspension on particle-quasi-chaotic or liquid crystal colloid technologies the following stipulations may be proceeded upon (wires (contractile)).

- 1.) Light bulb or illumination technology, beyond semiconducting.
- 2.) Cancer research, and treatment vehicle for medical-flight pattern of hotzones.
- 3.) New scan-print technology.

4.) Water cleaning and nasa reportive basis, blood and skin....(\*)

5.) Jet recovery with flight status 'go' and rail model in updated probability applied to econ. & survey of groundwater and potential functional technology on power generation and refining as well as material dig.

I may no longer be a plaintiff in a reportive basis of a citizen of America.

I have determined my rights relate now in relation to terms of methods of assistance of people with health, only, and exclusively in relation to all but the religion of Christianity.

\*A novel means to overcome a immediately unfortunate pan of events is to consider the equipment per a \*unique and [to investigate] process of catalog-file recovery, on digital record(s) per singleton of corrupt character-table.

a.) I hold expressly no highly sufficient interest in African American Laws or Religious Backing of Following in this Religion.

b.) I hold expressly a limited and sufficient interest in the laws of Islam.

c.) I hold a highly interested relationship of myself to the laws of American Indians.

d.) I hold no pre-cataloged interest entirely recovered and organized of laws of Buddhism for of Enforceable means to implement or publicize, but one and another expressed Dharmic Contributory relation of a Pliant to Admissible Confessorial given demonstrative works and documented belief.

e.) I hold no persuasion to follow Islam, and have formatively motioned against myself doing so.

f.) I hold no persuasion or a limited persuasion to follow Buddhism.

g.) I have and hold no expressed persuasion to follow African American Buddhism.

h.) I hold similar sympathies to the Christian Religion, and would associate the function of law, per my understanding with the Testimony of the Christian Bible.

i.) I hold no pre-arraigned or un-arraigned 'rogue' element of law provision notarized in relation to the Laws of either of these religions or their conguacy in various schools, or pertained groups, administratively provisional to the suppliant notion of a catalog of updated Historical contribution.

j.) I hold no equated but Historical view comparative Judiasm.... And would consider the study of language, symbolically retained current themology, and historical works of contribution.

k.) I would not include a relationship of view to wed to 'a person' of Judiasm, Christianity excepted in similar sympathy, and no view to wed a person of Buddhism in all but Zen historical transmissive teaching.

l.) I hold no view or aspiration to wed into the family or a familial partnership of the people of Islam [preferentially unto the view it would be stipulated she held concern or liveliness to interest.]

I would be advocation to the view of religions functioning, with an intermin relationship limitation of the laws of court, administrative officials and people in religious outflow and contribution to surrounding groups, and courts, laws of religion no more all excepting inclusive of all religions in all linguistic and numerical plea or codesign. I possess no symbolic universal language or key.

- 1.) Including the stipulation the 'delay function of the equipment and copy-righted progression and detectiveship process and procedure' and my isolation, per review.
- 2.) Given informative 'fine' and process as implemented in a judges ruling, per notary and post, and the reportive basis of my true-false of one 'theft or stealing of 11.29 or 79', and false of dichotomizing a releaseable contradiction in selection of copy and formattted basis.
- 3.) Obama, as in license, prioritized the 'gold capital' for of gainful action, whence it was entitled of disclosure to my priority defense, if and only if there was a fine, for that of the actionable intention of the mutual exclusivity of the two\* notarized contractual defaults.

What is true, is I have a fine for the 11.29 or 11.79, and any alternative fine may be allocated given Obama.

As in priority, were 'I' to afford talking with a 'J'udge, and informatively of 'O'bama, *it is true there is an allocated charge, and stipulation prior 10 moons to paying a fine for the theft of the cigarettes.*

As per common sense, allocation in-cent(s) allocate to a 'dollar', which is 'paper' historically *this entitles were\* then paper to issue to-me [re: a Warrant], it would be of 'cents' in allocation of-charge perveyant an action and intention.* The dollar (11), is a lesser denomination and entitles the withheld prescription the issuance is of my 'past' issuance in retention of the '29' for in *greater denominative unitary co-example in issuance of a fee or bill-notary unto.*

*6210 fee. (100) impartial logic.*

Denominatively there was a struggle, and in a 'card-shuffle' it is versed of this charge for that given the Judge and court.

Thus, I must pay a fine one way, and an additional charge in one way, and for that of the charges have withheld to guilty of one policy, a second, and hold only a list to-four charges of theft, without states (4-color). The one charge is withheld, and in paying it, I clear a detectable catalog and case.

I stated to Ava I was guilty of theft, I had a fine to pay, and was innocent of another crime, then that I wished to marry her.

This suited it, the disclosure entitles me to my first entrance of the reply basis, that it is late, there are two, me and another, for which it is auxiliary, for that of the engineering, an entitled way to suite from within here, to outside 'there', and one is A.

I decided the 'a' and 'b' should in-fact go-adjacent, with a plug between them of variety points, of the 'vertical linkage'. As it plays out in practice *this is one way to think about it*, but as-for the device in place – *in real terms* – the device has a 'ribbon cable' connecting the two double sided boards, with a more advanced topology.

This then relates of the 'graph' of the P\_{3,2} (x) K\_{2,2} (x) P\_{3,2} (x) K\_{2,2} (x) SO(3,1) (x) SO(3,1) (x) SU(2) (x) SU(2)

8+8+10+4

I decided in the end, to do an 'optical interlayer' Amiga for the 'bridged equipment', with the Chessboard. Parity check on Amiga and the Optical-disc(s). This should standardize to a conventional computer, capable of robust computation, with ADC, and so-on. The device operation may be manually reset given switches, but potentiates a basic process and simulation.

The only\*-questionable attribute, is if the basic-cellular-automata model diverges here in the given markov process of the rationals and the transcendent number(s) given ideal, homeomorphism, goldbach's conjecture, and the four color theorem. The question is if the 'coordinate orientability' disguises or changes the subtle nature of immediacy of truth.

To transcend the law of probability, and the guise of mathematical sigma-average and working-average, the disparity for a general 'central potential' in brownian time, is affixed of a return concentration of the painleve in relation to a wronskian of the inhibition to co-cyclicity of the convex bainaci space of the upper toplinear matrix graussmannian summation on the vertex model.

The result is from a deep inquiry into the Projection Formula and the Gauss-Bonnet theorem of orientable manifolds.
