One: I guaranteed my-future, and have not approached anyone personally with insensitivity and without courtesy on behalf of sensitivity to careful approaches of personal emotional and intellectual, as well, as emotionally securable intention, as to relationships. That is understood!

Two: What is a decision, is 'ahead of me sometimes' - tonight, I understood, I-was-being-stupid! I then, considered questions and answers relate as a process through which we develop, and the question is primary to the nature of a 'what-if (not to be confused with a decision and instinct), or if-then' - and leads to the answer of a procedure, as a general consideration in-life through the process of living.

Third: I tried to be-brief, I was perhaps (of instinctual desires and comprehensive procedures) overtaxed of decisions.... This example, I thought, was a necessary means to communicate as demonstrative of a recoverable condition.

Fourth: I have guaranteed my-future, in relation to the email to Jake.

Fifth: The device is a 220 MOhm 'boundary conversion semipermeable processor' for Synths, it is worth essentially 480,000-496,200 in patent rights evaluated over (6.5-19 year's in annum).

So,..... I will 'miniaturize' the process with UNM, and get a job in my future, first came the experimental science, etc,..... & study. The change to experimentally applied science improved my gesture to a new generational 'margin and inclusion'.

Subject: My Uncle is-alive, - I understood this simple guarantee.... What about your-uncle?  
To: Jake Knudsen <jake.knudsen@gmail.com>

Amazon.com: Cable Matters 2-Pack 5 Pin DIN MIDI Coupler Gender Changer (MIDI Extender Adapter) : Electronics

My device, for which I am worth 645,200,000 dollar(s)-now, is patentable for 28% royalty, and wholesale 22.56 w/ tax to 24.98..... **when miniaturized and placed INSIDE a MIDI coupler (gender of connection interoperability and conversion of wave(s) between Synthesizers).**

M/F, F/F, M/M, F/M.... (the 'A' and 'B' 'mini' and 'C' types).

Essentially, for a manufactured\* cost of (2.26-3.15-4.60)\$ per piece.....

It fit(s) operatively *between Synths, and incorporates a 'T' potential-adaptor for that of computational intercarry at all moments.*

This is the one and only problem I wanted to solve with three way and two way, to fourth basis compatible with old, new, and existing technology.
