The foundation is development.

I understand now that elliptical (Jacobi/Abel) theory includes a problem with the geometry of Appolonius/Diophante/Pascal/Lagrange/Godel/Moebius/Pythagoras/Riemann/Guass/ and Ramanujan/Hardy and Turing.

The computer is insufficient to strategize an effective higher-Tc with or without securable means to development with Quantum Technology.

This is as a probabilistic-treatment, justifies a relation of (Radermacher variables) in relation to probabilistic (sinc and Hopf) bifurcative minimal-O spaces (Bianchi) - thus, - with the continuum, without a rendering for a closed genera of group at 'homogeneous mapping) - the results, and theorem that qualitates a comprehension without Quasistatic or Dynamic Lagrange prohibits a proper theorem of experimental basis of confirmative or valiative process of the development of a theory of all phases, or general (mathematical completion and self consistency) in Superconductivity... Akin, a biological and organic process of type theorem.

Thus, object(s) and emergence do not satisfy the relation for what in levity of a relation to an argument falls unvindicated through analysis.... in the context, of an Earth-Moon-Sun system.

There is little alternative, for a theorem predicts its failure.
